CREDIT CARD ANALYTICS DASHBOARD

Weekly Performance & Customer Insights

Made with GAMMA

Project Overview

This project focuses on analyzing credit card transactions and customer data to generate meaningful business insights using Power BI.

This project analyzes credit card transaction and customer data to identify trends, patterns, and key performance indicators.

The main objective is to provide a comprehensive view of financial performance and customer behavior using an interactive Power BI dashboard.

The dashboard enables stakeholders to monitor revenue trends, evaluate customer segments, and support data-driven decision-making.

Made with GAMMA

Key Metrics

57M	8M	46M
Total Revenue	Total Interest Earned	Total Transaction Amount

Customer Segmentation based on Age, Income, and Gender

Made with GAMMA

Data Pipeline

1. CSV Files
2. PostgreSQL Database
3. Data Cleaning
4. Power BI
5. Dashboard

Data Processing Steps:

- Collected raw data in CSV format
- Imported data into PostgreSQL database
- Created structured tables for customer and transaction data
- Performed data cleaning (handled null values, corrected data types)
- Established relationships between tables

Data Modeling in Power BI

Data Modeling in Power BI:

- Built data model using relationships
- Created calculated columns and measures using DAX

DAX Implementation:

- Age Group classification (20–30, 30–40, etc.)
- Income Group categorization (Low, Medium, High)
- Revenue calculation (fees + transactions + interest)
- Weekly comparison (current vs previous week)

Made with GAMMA

Credit Card Dashboard – Power BI

Dashboard Features:

- KPI Cards displaying Revenue, Interest, and Total Transactions
- Revenue trend analysis over time (weekly basis)
- Customer segmentation by Age Group and Gender
- Card category analysis (Blue, Silver, etc.)
- Geographic analysis by state

Filters Available:

- Quarter selection
- Week number filter
- Card type filter

The dashboard is interactive and allows users to drill down into specific segments for deeper analysis.

Key Insights from Analysis

Revenue increased by 28.8% compared to the previous week, indicating strong financial growth

Male customers contribute higher revenue (31M) compared to female customers (26M)

Blue and Silver credit cards account for approximately 93% of total transactions

Top performing states include Texas (TX), New York (NY), and California (CA), contributing around 68% of total revenue

Overall activation rate is 57.5%, showing moderate customer engagement

Delinquent rate is 6.06%, indicating manageable credit risk levels

These insights help in identifying high-performing segments and areas for improvement.

Business Impact

- Provides clear visibility into customer spending behavior
- Helps identify high-value customer segments
- Enables tracking of revenue trends and performance metrics
- Supports data-driven decision-making for financial strategies
- Assists in improving customer targeting and retention strategies

The dashboard can be used by stakeholders to monitor performance and take timely actions.
